

Template Week 5 – Operating Systems

Student number: 578688

Assignment 5.1: Unix-like

a) Find out what the difference is between UNIX and unix-like operating systems?

Unix is the original operating system where as unix-like operating systems are just repackaged distributions of Unix.

b) Study the image above named UNIX timeline. Find out who Ken Thompson, Dennis Ritchie, Bill Joy, Richard Stallman, and Linus Torvalds are and what they have contributed to the development of UNIX or unix-like systems and to IT in general. TIP! English-language sources often contain more detailed information about these individuals.

Ken Thompson - Designed and implemented the original Unix operating system.

Dennis Ritchie - Created the C programming language and co-developed the Unix operating system with Ken Thompson.

Bill Joy - co-created the Java programming language, and was pivotal in developing the BSD Unix operating system with built-in TCP/IP, laying foundations for the internet.

Richard Stallman - founded the **free software movement**, the **GNU Project**, and the **Free Software Foundation (FSF)**, pioneering "copyleft" with the GNU General Public License (GPL) and creating essential tools like GNU Emacs, GCC, and GDB.

Linus Torvalds – He created the **Linux kernel**, the core part of the operating system that powers most of the internet, servers, and Android devices, and developing **Git**, the widely used version control system.

c) What is the philosophy of the GNU movement?

It champions user freedom and control in computing, based on four essential freedoms: to run, study, share, and modify software.

d) Does Ubuntu as a Linux operating system conform to the philosophy of the GNU movement? Please explain your answer.

Yes, Ubuntu doesn't restrict what the user is capable of doing.

e) Find out what is the Windows Subsystem for Linux?

It is a feature in Windows that allows you to run a full Linux environment directly on Windows without a virtual machine or dual-booting.

f) Find out, which operating system family belongs to Android, iOS and ChromeOS?

iOS is based on Darwin whereas ChromeOS and Android are both reliant on the Linux kernel.

Assignment 5.2: Supercomputers and gameconsoles

- a) **Research on this site what supercomputers are used for and write a short summary of it:**

<https://www.computerhistory.org/timeline/search/?q=Supercomputer>

Supercomputers are used for processing large amounts of data such as in space vehicle analysis, astrophysics, weather and ocean modeling, supercomputers are also used when a high-speed, low-latency interconnection network is required, Furthermore supercomputers with their large quantity of CPUs and their capabilities to process up to 32 gigaflops, they are used in real-time processing of satellite images, and for simulating molecular models in AIDS research.

- b) **IBM is a company that has already built a number of supercomputers. One of them is IBM's Roadrunner. The CPU developed for this supercomputer was further developed at a later stage as the CPU for the PlayStation 3 console. Find out what a PlayStation 3 cluster is and what it was used for?**

It is a supercomputer that was made by bundling a bunch of playstation 3's so that you can use all their CPUs together for medical research

- c) **You can build a supercomputer by putting a few computers together in a cluster. Here's what Oracle did with a collection of Raspberry Pi's, for example:**

<https://blogs.oracle.com/developers/post/building-the-worlds-largest-raspberry-pi-cluster>

What specific operating system is running on this cluster?

Oracle Linux for ARM

- d) **Does Oracle's Raspberry Pi supercomputer appear in the list of the 500 fastest supercomputers in the world? Make a logical decision for this, without going through the entire list.**

<https://www.top500.org/lists/top500/list/2023/06/>

No the Raspberry Pi supercomputer doesn't have enough processing power to compete with real supercomputers.

- e) **What CPU architecture is used for the PlayStation 5 and Xbox Series X?**
What operating systems run on these consoles?

AMD Zen 2

What conclusion can you draw from the answer to the previous question?

Both the PS5 and the Xbox Series X are just computers.

Assignment 5.3: Working with Windows

Take relevant screenshots of the assignments below

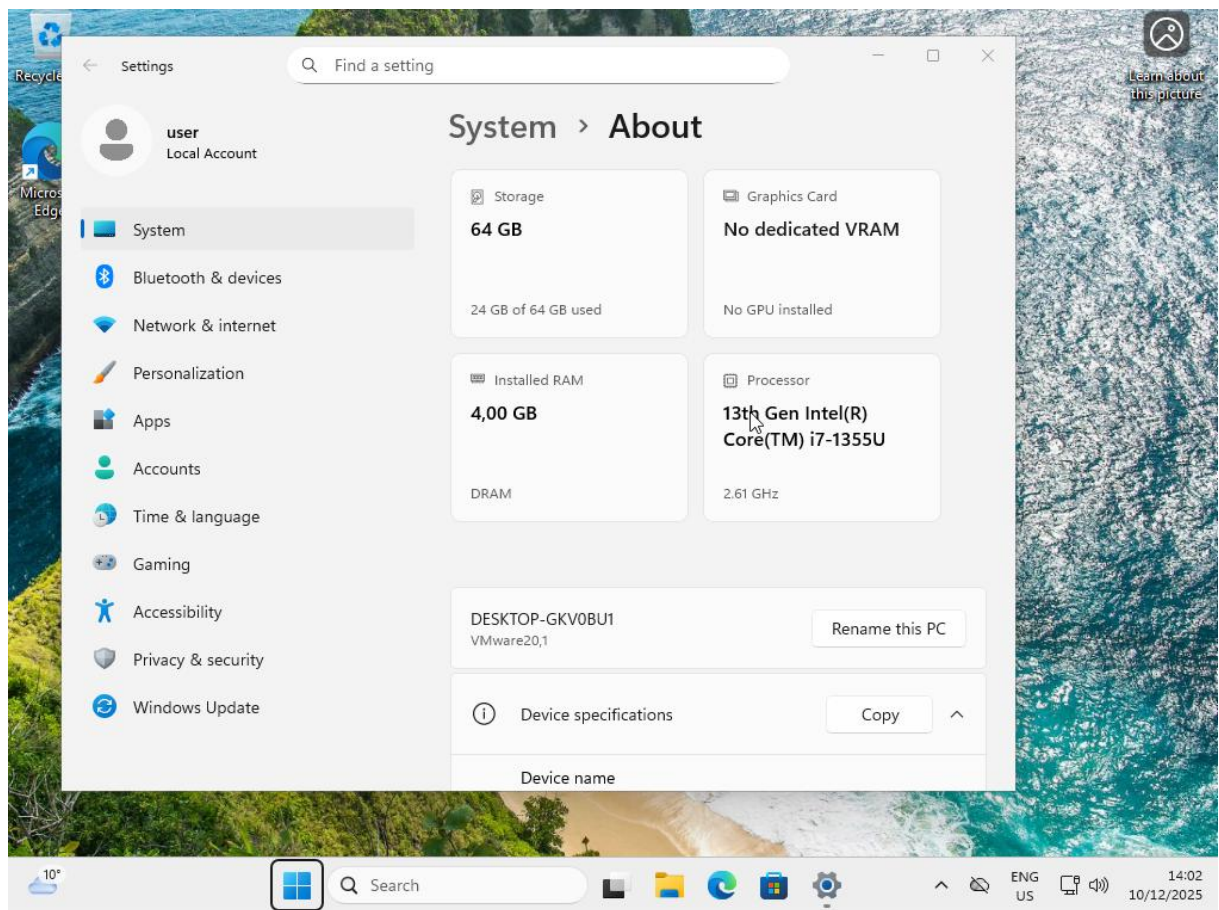

- a) Practice for about 10 minutes with the  keyboard shortcuts combinations, skip the general shortcuts in this exercise. Take a look at which screens are opened.

- b) The file explorer can be opened with  + E, Which key combination could you also use?

 + 3

- c) Open the system properties with a  key combination, take a screenshot of the open screen. Paste this screenshot into this template.

 + X + Y

- d) Open task manager with a key combination. Take screenshots of the tabs: processes (shows active processes), performance, and users. Place these three screenshots in this template.

- e) If you're giving a PowerPoint presentation and you connect your laptop to a projector, Windows can use the projector as a second screen. For example, you may have Outlook open on your first screen that you don't show over the projector, while the PowerPoint presentation is displayed on the projector, or the second screen. Which key combination should you use for this?

⊞ + P

- f) If you leave the classroom for a while and you leave your laptop behind, it is wise to lock the screen. Your Apps will continue to run in the background. So, for example, if you're waiting for a download that takes a while, lock the screen and get a cup of coffee. Which key combination do you use for this?

⊞ + L

- g) Open the Run screen with a key combination. On this screen, type CMD and press <enter>.
Take a screenshot of this result and paste it into this template.

Assignment 5.4: Working with Linux

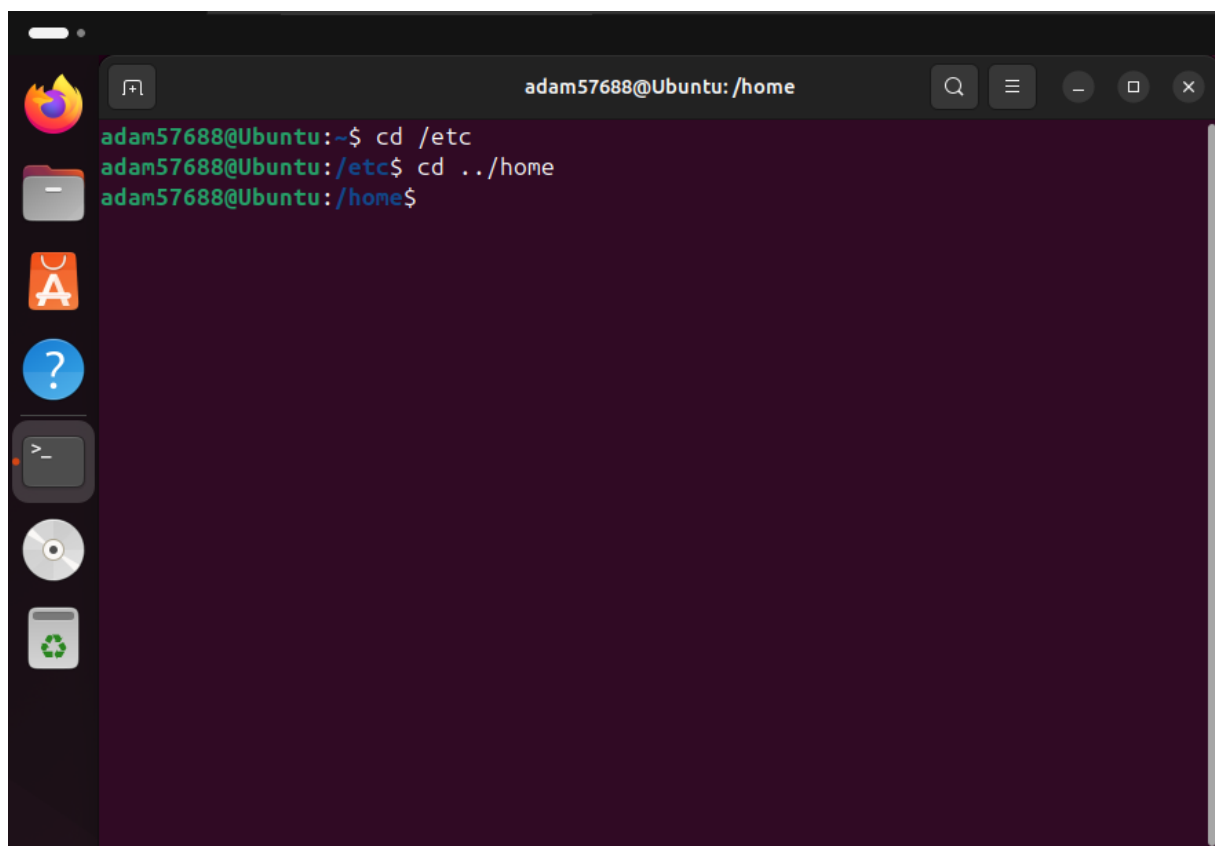

Relevant screenshots + motivation

```
adam57688@Ubuntu: ~/Documents
adam57688@Ubuntu:~$ nano file.txt
adam57688@Ubuntu:~$ ls
Desktop  Downloads  Music      Public  simple.c  Templates
Documents file.txt   Pictures  simple  snap      Videos
adam57688@Ubuntu:~$ cp file.txt ~/Documents
adam57688@Ubuntu:~$ cd Documents
adam57688@Ubuntu:~/Documents$ ls
code  code.zip  file.txt  hello  hello.zip
adam57688@Ubuntu:~/Documents$
```

I copied the file using copy and paste through the file explorer.

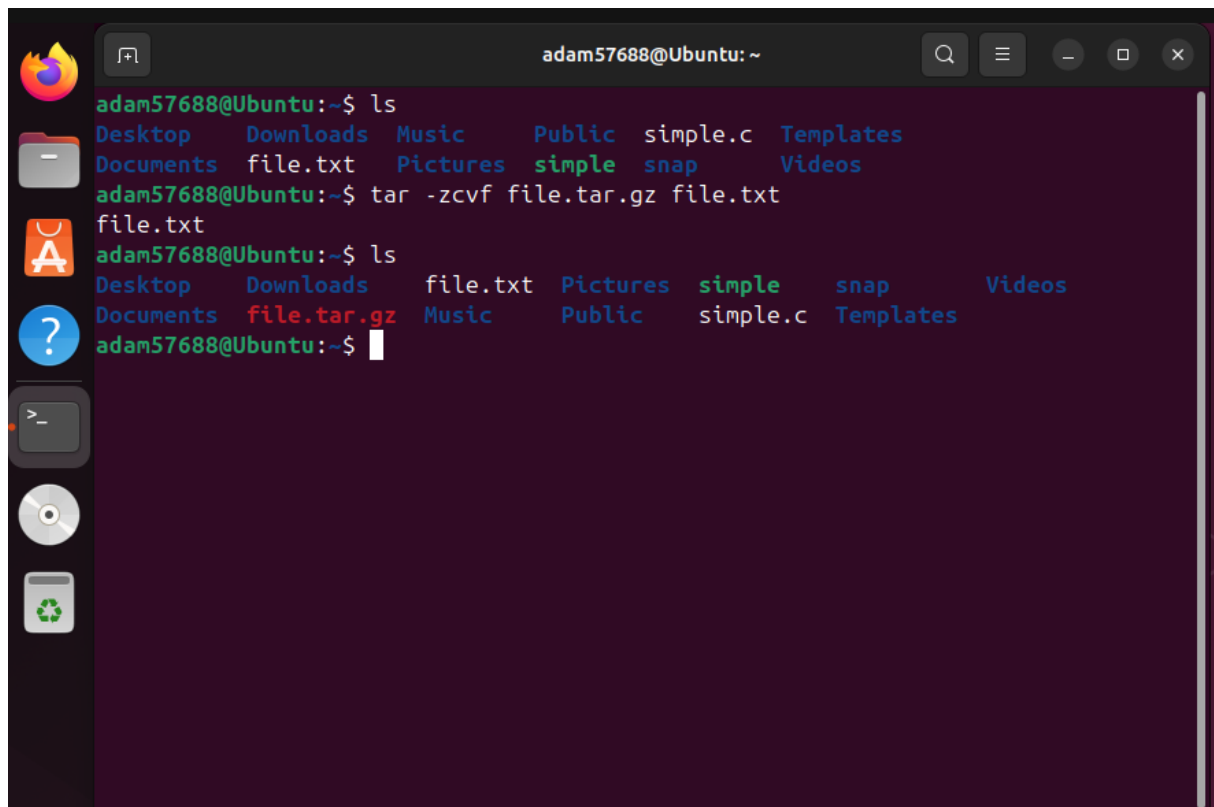

One significant difference in Linux's file structure from Windows is that Linux uses / to separate different directories whereas Windows uses \.

The /etc directory is usually where all the configuration files for the operating system are.

To compress a text file into a tar archive I would use `tar -zcvf (name).tar.gz (target_directory)`

To extract the tar file I would use `tar -zxvf (archive name).tar.gz`

A terminal window titled 'adam57688@Ubuntu: ~' with standard window controls. The terminal shows a sequence of commands and their outputs. First, 'ls' is run, listing directories like Desktop, Downloads, Music, Public, simple.c, Templates, and Documents, and files like file.txt, Pictures, simple, snap, and Videos. Then, 'tar -zcvf file.tar.gz file.txt' is executed to compress file.txt. Finally, 'ls' is run again, showing that file.txt has been replaced by file.tar.gz in the Documents directory.

```
adam57688@Ubuntu:~$ ls
Desktop  Downloads  Music      Public    simple.c  Templates
Documents file.txt    Pictures   simple    snap      Videos
adam57688@Ubuntu:~$ tar -zcvf file.tar.gz file.txt
file.txt
adam57688@Ubuntu:~$ ls
Desktop  Downloads  file.txt  Pictures  simple    snap      Videos
Documents file.tar.gz Music     Public    simple.c  Templates
adam57688@Ubuntu:~$
```

```

- Proof that the Debian 13 server stored a back-up image of the Ubuntu 24.04 Desktop VM.

```
adam57688@debian:/$ ls /srv/images  
ubuntu2404_vm.img.gz  
adam57688@debian:/$
```

- Proof that you can restore the back-up image into an empty VM.
